

Environmental Policy of Kuraray Europe GmbH

Environmentally compatible use of our products and meeting our customers' requirements in this respect are key objectives of our corporate policy.

That includes systematic action to protect and improve our environmental profile, compliance with the relevant environmental laws and regulations and ensuring safe production processes and working conditions.

One visible expression of this is the fact that environmental aspects are given equal priority in KEG's integrated management system.

The resources used in all major environmentally relevant processes and the resultant emissions (production effluent, exhaust air, greenhouse gasses), waste and noise are constantly monitored, analysed and managed with a view to achieving a sustained improvement in our specific environmental performance.

Steadily raising the energy efficiency of our processes is another key focus. To supplement the environmental management system, KEG has therefore introduced an energy management system and defined its objectives in a separate Guiding Principle.
